PREPARING FOR MIPS 2019

Specialty Specific Quality Measures to Avoid 2021 Penalty

Here is a list to help you find six quality measures based upon your submission method.

One measure must be a high priority (*).

Quality Measure	Definition	Submission Method
<input type="checkbox"/> #130 Documentation of Current Medications in the Medical Record*	Percentage of patients 18 years and older for which eligible professional attests to documenting a list of current meds using all resources available on the date of encounter. Includes ALL known prescriptions, over-the-counters, herbals and vitamin/mineral/dietary supplements. Every visit during the Measurement Period must be done.	Claims* EHR QCDR Registry
<input type="checkbox"/> #182 Functional Outcome Assessment*	Percentage of visits for patients aged 18 years and older with documentation of a current functional outcome assessment using a standardized functional outcome assessment tool on the date of the encounter AND documentation of a care plan based on identified functional outcome deficiencies on the date of the identified deficiencies.	Claims* Registry
<input type="checkbox"/> #131 Pain Assessment and Follow-Up*	Percentage of visits for patients aged 18 years and older with documentation of a pain assessment using a standardized tool(s) on each visit AND documentation of a follow-up plan when pain is present.	Claims* Registry
<input type="checkbox"/> #128 BMI	Percentage of patients aged 18 years and older with a BMI documented during the current encounter or during the previous twelve months AND with a BMI outside of normal parameters, a follow-up plan is documented during the encounter or during the previous twelve months of the current encounter. Normal Parameters: Age 18 years and older BMI ≥ 18.5 and < 25 kg/m ²	Claims* EHR QCDR Registry
<input type="checkbox"/> #222 Functional Deficit: Change in Risk-Adjusted Functional Status with Elbow, Wrist or Hand Impairments*	A patient-reported outcome measure of risk-adjusted change in functional status (FS) for patients 14 years+ with elbow, wrist or hand impairments. The change in FS is assessed using the Elbow/Wrist/Hand FS patient-reported outcome measure (PROM) (©Focus on Therapeutic Outcomes, Inc.) The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality.	Registry
<input type="checkbox"/> #223 Functional Deficit: Change in Risk-Adjusted Functional Status with General Orthopedic Impairments*	A patient-reported outcome measure of risk-adjusted change in functional status (FS) for patients aged 14 years+ with general orthopedic impairments (neck, cranium, mandible, thoracic spine, ribs or other general orthopedic impairment). The change in FS is assessed using the General Orthopedic FS PROM (patient reported outcome measure) (©Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality.	Registry

* High Priority

* Only Medicare Part B patients are included in claims based reporting.

Specialty Specific Quality Measures to Avoid 2021 Penalty

Here is a list to help you find six quality measures based upon your submission method.
One measure must be a high priority (*).

Quality Measure	Definition	Submission Method
<input type="checkbox"/> #218 Functional Deficit: Change in Risk-Adjusted Functional Status with Hip Impairments*	A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with hip impairments. The change in functional status (FS) is assessed using the Hip FS patient-reported outcome measure (PROM) (©Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality.	Registry
<input type="checkbox"/> #217 Functional Deficit: Change in Risk-Adjusted Functional Status with Knee Impairments*	A patient-reported outcome measure of risk-adjusted change in functional status for patients aged 14 years+ with knee impairments. The change in functional status (FS) is assessed using the Knee FS patient-reported outcome measure (PROM) (©Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality.	Registry
<input type="checkbox"/> #220 Functional Deficit: Change in Risk-Adjusted Functional Status with Lumbar Spine Impairments*	A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with low back impairments. The change in functional status (FS) is assessed using the Low Back FS patient-reported outcome measure (PROM) (©Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level by to assess quality.	Registry
<input type="checkbox"/> #219 Functional Deficit: Change in Risk-Adjusted Functional Status with Lower Leg, Foot or Ankle Impairments*	A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with foot, ankle and lower leg impairments. The change in functional status (FS) assessed using the Foot/Ankle FS patient-reported outcome measure (PROM) (©Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality.	Registry
<input type="checkbox"/> #221 Functional Deficit: Change in Risk-Adjusted Functional Status with Shoulder Impairments	A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with shoulder impairments. The change in functional status (FS) is assessed using the Shoulder FS patient-reported outcome measure (PROM) (©Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality.	Registry
